The Trust is registered under the Foreign Contribution Regulation Act, 1976 (FCRA) to accept donations in foreign exchange.

SHADOW TO LIGHT

Restoring sight, dignity and independence

Kabliji Hospital and Rural Health
Centre

Kabliji Hospital and Rural Health Centre, Haryana, offers health information, advice and medical care to all those attending the clinics regardless of their ability to pay.

Over the last 35 years the Kabliji ophthalmologists have developed safe and effective eye care, providing treatment for a range of conditions including cataract surgery using intra ocular lenses.

Visiting senior clinicians travel to the rural centre daily and provide the high quality treatment expected in the large hospitals in New Delhi. Working alongside the resident medical staff, the centre also offers a full range of primary care services including, mother and child health and general medical care. In cooperation with the village leaders, we have supported the development of public health and education.

Cataracts cause 80% of the blindness in our patients and our intra-ocular lens surgery (IOL) aims to not only restore sight but to provide ongoing care and support.

Can you imagine losing your sight? Can you imagine not being able to see your children and grandchildren? Can you imagine not being able to see to work, to find and prepare food, and be dependent on others for your welfare?

A fantastic way of celebrating a special birthday or a special event in your life!!

Please consider sponsoring a patient to return from shadow to light. Your donation of Rs. 6000/- (£ 60.00 or \$100) can be given in the full knowledge that each patient is treated with the kindness and dignity he or she deserves.

Our health workers travel to the villages to screen those who have lost their sight. The patients are brought to the hospital in the hospital transport. At the hospital each patient is assessed by the senior ophthalmologist and after a full health check is prepared for surgery. Besides free medication the surgery includes providing a new lens (IOL) which will help the patient see again.

Following the operation the patient may stay in hospital overnight to be monitored by the health staff. The patients are provided with a nutritious meal, and once they are cleared for discharge they are returned safely home again in the hospital transport. After 4-6 weeks they return to the hospital for a review by the senior specialist.

You are welcome to stay in touch with us through Facebook. We will celebrate your special event at Kabliji and you will receive a photograph to commemorate the event.
